Education

Exp. 2024

UNIVERSITY OF SOUTHERN CALIFORNIA
B.S Computer Science, Minor in Computational Biology & Bioinformatics
GPA: 3.86

Research Experience

Jul 2023 - Present

Undergraduate Researcher.
ADVISED BY CHARLESTON CHIANG, IAIN MATHIESON & SARA MATHIESON
University of Southern California, University of Pennsylvania, & Haverford College

- On-going project collaboration to develop a deep learning method to detect ancient introgression from ancestral recombination graphs without a sequenced reference.

- Achieved comparable results in simulation with statistical method, S*.

Feb 2021 - May 2023

Undergraduate Researcher.
ADVISED BY CHARLESTON CHIANG
University of Southern California, Keck School of Medicine

- Demonstrated discrepancy when deploying the state-of-the-art TOPMed Reference panel for imputation of non-European populations such as East Asian, South Asian, Oceanian, and Southeast Asian populations, thus exacerbating disparity in performing genome-wide genetic studies in diverse understudied populations.

- Designed a framework using meta-imputation to improve imputation quality in East and Southeast Asian cohorts, particularly for population-specific variants.

- Developed interactive map to visualize imputation statistics for over 120 populations from 39 publications.

Oct 2022 - Sept 2023

Undergraduate Researcher.
ADVISED BY LUIS A. GARCIA
University of Southern California, Department of Computer Science

- Evaluated generalized stress detection for health workers using wearable devices across three datasets with shared stress representations.

- Demonstrated gradient boosting trees outperform linear support vector machines, random forest, and feed-forward neural networks for continuous stress detection.

- Identified current limitations of generalized stress detection driven limited shared modalities across datasets, small sample sizes, and varying stress definitions.

Jun 2020 - Jan 2021

Undergraduate Researcher.
ADVISED BY ELIA TAIT-WOJNO
University of Washington, Department of Immunology

- Elucidated how the PGD2-CRTH2 pathway suppresses Type 2 intestinal immune response during helminth infections in murine models with single-cell RNA sequencing analysis.

- Identified canonical markers of epithelial immune cell types and characterized gene expression in inflammatory immune response in murine cecum during infection.

Jul 2019 - Aug 2019

Research Intern.
ADVISED BY JAKE VALENZUELA
The Institute for Systems Biology, Baliga Lab

- Developed electroporation protocol that facilitates the transfer of CRISPR-Cas9 complex into *C. reinhardtii*.

- Created and presented how nitrogen starvation increases lipid production in *C. reinhardtii*.

Work Experience

Jun 2021 - July 2023

Viterbi Student Ambassador, Content Lead.
USC VITERBI SCHOOL OF ENGINEERING ADMISSIONS

- Led team of 12 students to produce bi-weekly virtual student panels about student life for audiences of 200+ prospective engineering students.

- Advertised panels through social media outreach, bi-weekly YouTube videos, and Spotify podcasts.

Aug 2022 - May 2023

Artificial Intelligence Intern.
THE ELLISON INSTITUTE FOR TRANSFORMATIVE MEDICINE

- Developed deep learning models to automate the diagnosis for breast and prostate cancer from digital pathology.

- Refined quality control pipeline to process thousands of whole slide images (WSI) in the cloud.

May 2022 - Aug 2022

Software Engineering Intern. ORACLE CLOUD INFRASTRUCTURE

- Designed and tested automated daily health checks for cloud billing accounts.

Awards & Honors

Barry Goldwater Scholarship
USC Viterbi Dean's List
USC Viterbi Undergraduate Merit Research Fellowship
USC Presidential Scholarship
USC Dornsife Thematic Option, Reading & Writing

Oral Presentations & Other Projects

May 2023	Imputation Efficacy Across Global Human Populations, *Southern California Evolutionary Genetics and Genomics Meeting 2023*, University of California Irvine.
Dec 2022	Assessing Imputation Quality for Diverse Populations, *Department Research Seminar, Center for Genetic Epidemiology* Keck School of Medicine.
Nov 2022	Predicting Foster Care Outcomes in the United States with the National Youth in Transition Database, *Artificial Intelligence for Sustainable Development Final Presentation,* University of Southern California.
Nov 2022	Detecting Chronic Stress in Medical Residents with Wearable Devices, *Fall CAIS++ Project Showcase 2023*, University of Southern California.
Apr 2022	Utilizing Reinforcement Learning to Predict Polyculture Formations, *Spring CAIS++ Project Showcase 2022,* University of Southern California.
Dec 2021	Modeling Malaria Outbreaks Utilizing Weather Factors, *Fall CAIS++ Project Showcase 2021,* University of Southern California.
Apr 2021	Predicting pandemic risk of Influenza mutations with Deep Learning, *Spring CAIS++ Project Showcase 2021,* University of Southern California.

Teaching

Jan - Apr 2023	Project mentor for undergraduate machine learning projects through CAIS++
Sep - Dec 2022	Curriculum Lead for open source deep learning curriculum for undergraduates
Jan - May 2022	Course Producer for CSCI 104, Data Structures and Objected Oriented Programming

Leadership

Aug 2022 - May 2023	**Co-President.** The Center for Artificial Intelligence's Student Branch (CAIS++) Directed all organization initiatives, including 5-8 semester projects, 4 Fall curriculum groups, two project showcases, weekly general meetings, and speaker events to engage undergraduates in artificial intelligence.
Sep 2021 - May 2022	**Project Manager.** Novus Think Tank. Oversaw six focus project groups that targeted critical social issues impacting the university and surrounding areas.
